# Selecting Tubes For Counterpoint Products.

Counterpoint vacuum tubes are aged, pre-tested and hand selected. Every tube is burned in (aged) for over 180 Hours in order to screen out failures. This also allows it settle to its final values prior to testing. Noise, distortion and tendency toward microphonics are all measured. Approximately 60% of all the tubes we purchase fail these tests. They are simply not good enough to use in Counterpoint equipment.

Before a tube is shipped, it is tested *once again in the actual product for which it is intended.* **A tube for an SA-1000 is tested in an SA-1000.** This careful hand-selection process assures perfect a match between Counterpoint product and the tubes within it.

When selecting a source for your replacement tubes, consider who has the most familiarity with your Counterpoint product. *The People Who Made It.*

## U.S. RETAIL PRICE — TUBES — MATCHED SETS
